

Module 3 — Custom Table Creation

Backend Development & Configuration

1. Milestone

Creation of a custom table to store ticket records.

2. Steps to Create the Custom Table

Open All menus → Search for Tables.

Under System Definition → Click Tables.

On the top right corner, click New.

Label: Incident WorkFlow.

Uncheck Create module.

Save the form.

3. Auto Number Configuration

Click the Controls section.

Enable the Auto Number checkbox.

Save the form again.

4. Form Configuration

Save the form and under Related Links click Show Form.

Open Configure from the Context Menu and open the Form Designer.

Create the fields required by the project.

5. Module Outcome

The Incident WorkFlow table is prepared as the project's structured storage location for school IT support ticket records.
