

Module 4 — Fields, Choices & Dependency

Structured Data Capture and Category/Subcategory Logic

1. Field Creation & Data Types

- Number — Auto Number
- Caller — Reference: sys_user
- Category — Choice: Network, Hardware, Access, Performance
- Subcategory — Choice: Wi-Fi, Projector, Forgot Password, Slow Computer
- Short Description — String
- Description — String
- State — Choice: New, In progress, On hold, Resolved, Closed
- Assigned Group — Reference: sys_user_group
- Assigned to — Reference: sys_user

2. Choice Configuration

After creating the fields with their appropriate types, add choices from the Form Designer.

The Choice list fields are Category, Subcategory, and State.

Add the required choices to the State field as well.

Save the form and reload it.

3. Implementing Dependency

Open the created table form and right-click the Subcategory field.

Click Configure Dictionary.

Under Related Links, click Advanced view.

Select the Dependent Field section.

Enable Use dependent field.

Select Category in the Dependent on field.

Save the form.

4. Dependent Choice Mapping

- Wi-Fi → Network
- Projector → Hardware
- Forgot password → Access
- Slow computer → Performance

5. Result

- Subcategory choices are displayed based on the selected Category, helping maintain consistent and structured ticket data.
