

Module 5 — Flow Designer Setup & Trigger

Creating the Auto Classification Flow

1. Automation Overview

When a student creates a new IT support ticket, the Flow Designer automation evaluates the Short Description for predefined keywords.

The flow automatically assigns the appropriate Category and Subcategory.

2. Create the Flow

Go to All menus → Search Flow designer.

Under Process Automation, open Flow Designer.

On the top right corner, click New and select Flow.

- Name: Auto Classify School IT Tickets.
- Application: Global.

Click Build Flow.

3. Trigger Configuration

- Trigger: Record Created
- Table: Incident Workflow
- Condition: Category is Empty

Click Done.

4. Flow Logic

Under Actions, select Flow Logic.

Use conditional branches to inspect the Short Description and update the record with the matching Category and Subcategory.

5. Module Outcome

The automation is configured to run when a new Incident Workflow record is created and its Category is empty.
