

Module 7 — Testing, Validation & Security

End-to-End Testing and Data Validation

1. Purpose

Validate that the developed solution works as expected, meets functional requirements, and follows basic security and access-control best practices.

The phase validates end-to-end automation, confirms data accuracy, and ensures only authorized users can access or modify ticket data.

2. Data Validation Checks

- Mandatory fields are captured correctly.
- Auto-number is generated without duplication.
- Category and Subcategory values are stored accurately.
- Reference fields resolve correctly to user and group tables.

3. Test Scenario 1 — Wi-Fi

Enter one Caller Name.

- Short Description: WiFi not working in library.

Save the form and reload it.

- Expected Category → Network.
- Expected Subcategory → WiFi.
- Email is sent to the caller email ID.

4. Check Email Notification

Open All menus → Search Emails.

Under System logs → Select Emails.

Search with the given subject name.

Open the record and under Related Links click Preview mail.

5. Test Scenario 2 — Projector

Enter one Caller Name.

- Short Description: Projector not turning on.

Save the form and reload it.

- Expected Category → Hardware.
- Expected Subcategory → Projector.
- Email is sent to the caller mail ID.
