

Module 8 — Deployment, Documentation & Conclusion

Update Set Completion, Export and Final Project Summary

1. Deployment & Final Documentation

The deployment phase moves the developed solution toward the target environment and finalizes project documentation.

The solution is intended to be stable, reusable, and ready for demonstration or production use.

2. Make Update Set Complete

Go to All menus → Search for Local Update Sets.

Under System Update Sets, select Local Update Sets.

Open Project Update Set.

Change State from In progress to Complete.

Save the form.

3. Export the Update Set

Under Related Links, click Export to XML.

The Update Set data is downloaded in XML format.

The downloaded file can be shared through WhatsApp or email according to the source project instructions.

The exported Update Set can be transferred to another environment.

4. Conclusion

The Auto Ticket Classification using Flow Designer project delivers an end-to-end automation solution for a school IT helpdesk.

The solution automatically classifies IT tickets based on the Short Description provided by students.

Dependent choice fields support data accuracy, while automated email notifications acknowledge ticket creation to the caller.

The phased approach supports clarity, stability, and maintainability. Testing and security validation support reliable operation and data integrity.

The project demonstrates how ServiceNow can be used for scalable, maintainable, user-friendly automation without complex scripting or machine learning.

5. Future Extensions Mentioned in the Source

- Assignment automation
- SLA tracking
- Predictive intelligence
